

# Data Sheet

# LinkView Software

The **LeadSolar LinkView™** monitoring software is included with the Link Gateway™ and offers a user friendly platform to support both developers and system owners. The software is capable of monitoring at the system, inverter or panel level, allowing users to easily see energy production and system status for either a single install or a fleet of systems. LinkView software simplifies operations and maintenance for all stake holders.

## Benefits

### Ease of Use

- User friendly summary page
- Local, web or Android/iPhone app based viewing
- One time registration, no cost for life of system

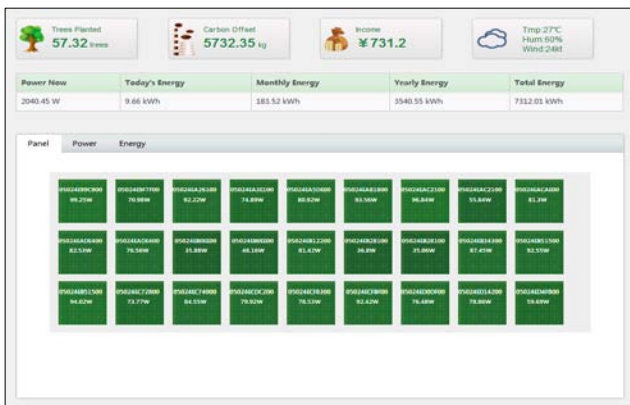

### Versatility

- Dual views for developer or system owner
- Panel, inverter or system level monitoring
- Features production, offset and estimated savings
